

Run of show — Tuesday 10:00–12:00, open floor 1:00–2:30

Minimum viable outcome (from the build brief, unchanged): every coach leaves with an assistant that is *named*, has a *personality*, completed *one successful delegation*, and has *one scheduled task created*. Everything else is bonus.

The two hard rules:

- **Never demo a routine by waiting for its scheduled time** — dispatch has a randomized multi-minute delay. Always use **Run now**.
 - **The projector shows Mike's screen doing exactly what the coaches do**, one step at a time. "Your screen should look like this" is the most effective sentence in the room.
-

9:40 — Doors / pre-flight (Stephanie)

- Sweep the room: app installed? Signed in? Windows machines get the Git check (triage #1).
- Coaches with no Code tab (free plan — Mike has the unconfirmed list from pre-work replies): pair them with a neighbor **now**, not at 10:15 when it's disruptive.

10:00 — The promise (Mike, 10 min)

By noon, three things will be true: your assistant has a name and knows your practice; it did a real piece of work for you; and starting tomorrow it writes you a morning brief on a page you bookmark. Show your own page from this morning — 15 seconds, no tour. Then the commitment-card teaser: "before lunch, each of you reads one sentence aloud."

10:10 — Install together (15 min)

Projector, one step at a time: Settings → Plugins → **Add** → **Add marketplace** → type `radialreview/bloom-coach-kit` → install → open a **new session** in a plain folder (Documents is fine — *not* a code project folder). Stephanie sweeps with the triage sheet. Nobody moves on until neighbors confirm the skill shows up when they type `/`.

10:25 — The interview (25 min)

Everyone runs `/bloom-coach-kit:meet-your-assistant` at once. Mike narrates the six questions from his own screen but **does not rush the room** — the practice question (Q4) is where the assistant gets good, say so out loud. Coaches who finish early: tell them to answer their assistant's first question honestly instead of helping neighbors — Stephanie does the helping.

10:50 — The hello (10 min)

Everyone: new session in the same folder, type "good morning." Let the room have the moment — this is the emotional peak of the day; don't talk over it. Then one instruction: "Tell it one true thing about a client — a name, where they are in the Growth Plan. That's how it learns."

Close the segment with the owner's manual, 30 seconds, verbatim:

One more thing before we put them to work. During setup, your assistant wrote you an owner's manual — a file called **MY-ASSISTANT.md**, sitting in your folder. Ask for it right now, in plain language: *"show me my owner's manual."* It'll pull it up.

That file is for three weeks from now, when something looks off and I'm not in the room: what each of your specialists does, things to try, what to do if the greeting stops, and who to email. You never edit it — if you want something changed, tell your assistant.

Why "ask for it" rather than "find the file": it works identically on Mac and Windows, it takes zero file-system knowledge, and it reinforces the day's one lesson — everything goes through the assistant. (It's a real file too — Documents folder, opens like any document — for the coach who wants to print it.)

11:00 — Connect + first delegation (20 min)

- + menu → connect **calendar** (and email if the room is moving well). Browser OAuth, approve, new conversation.
- Then one plain-language request each, their choice: *"What does my week look like?"* or *"Draft a follow-up to [real client] about their Quarterly Priorities."*
- Call out what happened structurally, once, in one sentence: "It handed that to a specialist. You'll never need to know which one."

⌂ 11:25 — THE CUT LINE

Behind schedule? Drop in this order — never compress the hello or the interview:

1. **Email connector** — calendar alone carries the demo; email lands in open floor.
2. **Morning-brief setup moves to open floor** — the MVO's "scheduled task" can be created for the room by showing Mike's already-running one and building theirs at 1:00.
3. **Delegation goes demo-only** — Mike's screen instead of everyone's, coaches run theirs at open floor.

On schedule? Proceed:

11:25 — Set up my morning (25 min)

Everyone runs `/bloom-coach-kit:set-up-my-morning`. Two questions, then the skill insists on a supervised **Run now** — coaches approve every prompt that appears (say it plainly: "this is you giving your assistant standing permission — you do it once"). The run ends with their page: **everyone bookmarks it before anything else happens**. Phones out is fine — the bookmark is the retention mechanism.

11:50 — Commitment cards (10 min)

One sentence per card: *"[Name] will [recurring task] every [cadence]."* Around the room, read aloud, no commentary between readers. **Photograph every card** — that's the follow-up list. Then lunch.

1:00–2:30 — Open floor

No agenda on the wall; the actual agenda:

- Stephanie triages anyone who fell behind (triage sheet order: install → setup → first use).

- Fast coaches: **add-a-specialist** — grow the roster with something from their real practice.
- **1:45 — "where this goes," on the projector, five minutes total, demo only:**
 - **Remote Control** (per the build brief — nothing to set up).
 - **Mike's Command Deck** — 60 seconds on the live page: check a box, click one link back to its source, done. Framing verbatim: *"Your morning brief is this, minus the parts you don't need yet. When you've got enough systems feeding you, this is where it goes — that's webinar two."* Do not tour it; the point is that it exists and it's real.
- Mike floats; Stephanie keeps the question log going — it closes out as the webinar backlog.

Not on Tuesday (parking-lot answers, verbatim)

- "Can it text/email me the brief when my laptop's closed?" → *"That's the cloud-routine upgrade — webinar two, it's a good one."*
- "Can it read my [CRM/other tool]?" → *"If it's in the connector menu, yes — grab me at open floor. If not, it's on the roadmap list."*
- Model/plan questions → *"Open the MY-ASSISTANT.md file in your folder — your assistant wrote you a cheat sheet during setup, and this one's in there."* Don't teach the model picker to the room. (Triage sheet row 15 has the actual fix if someone's blocked on a usage limit.)
