

# Slides outline — build Sunday, after the frozen-code run

---

Fourteen slides. The rule that decides slide vs screen:

- **SCREEN** when Mike is *doing* something — coaches watch a real thing happen once.
- **SLIDE** when coaches are *doing* something — the instruction stays projected the whole time they work, because half the room looks up mid-step and needs to re-find their place.
- Never narrate over a working room. Put it on the slide and walk the floor.

Slide design rules (for Sunday): one instruction per slide, type readable from the back row, no decoration that competes with an instruction. The demo is the production value.

**NOTE CARD** blocks are what Mike says, written to be glanced at, not read aloud verbatim.

---

## Segment 1 — The promise (10:00, slides 1–3, then screen)

### Slide 1 — Title

**On slide:** "Hire your assistant." Date. Nothing else.

**NOTE CARD:** Two hours from now you'll have hired someone. Not installed something — hired someone. They'll have a name you chose and a personality you picked, and before lunch they'll have done real work for you.

### Slide 2 — By noon, three things are true

**On slide:** three lines: *Your assistant knows your practice · It did real work for you today · Every weekday morning it writes you a brief.* No sub-bullets.

**NOTE CARD:** Point at line three — this one's my favorite. It doesn't wait for you to show up. Every weekday morning it writes up your day on a page you'll bookmark. Mine ran at 7:32 this morning. Let me show you.

→ SCREEN (15 seconds, no tour)

Mike's own morning-brief page from this morning. Real calendar, real names visible only if comfortable — otherwise scroll past fast; the *existence* is the point.

**NOTE CARD:** This is mine from this morning. Yours starts tomorrow. That's the whole pitch — let's build it. (FLIP BACK TO SLIDES — do not linger, do not tour the page.)

---

## Segment 2 — Install (10:10, screen once, then slide 3 stays up)

→ SCREEN (2 minutes)

Mike does the install once, slowly, narrating clicks: Settings → Plugins → Add → Add marketplace → type the name → install → new session → pick Documents.

**NOTE CARD:** Watch once, then you'll do it. The only typing is one name, and it's about to be on the screen. When it asks for a folder: Documents. Not a project folder — if you keep code on your machine, today is not its day.

Slide 3 — DO: Install (stays up ~10 min)

**On slide:**

1. Settings → **Plugins** → **Add** → **Add marketplace**
2. Type exactly: `radialreview/bloom-coach-kit`
3. Install **Bloom coach kit**
4. Open a **new session** — choose your **Documents** folder
5. Type `/` — you should see **meet-your-assistant** ✓ *When you see it, help your neighbor.*

**NOTE CARD:** Nothing. Walk the floor with Stephanie. The slide is doing the talking. Room moves on when neighbors confirm step 5, not when the fastest coach finishes.

---

## Segment 3 — The interview (10:25, slide 4 up throughout)

Slide 4 — DO: Meet your assistant

**On slide:** Type `/bloom-coach-kit:meet-your-assistant` · six questions, ~10 minutes · **Question 4 is where they get good — spend your words there.** · Stuck on a name? Say so — it'll offer some.

**NOTE CARD:** Six questions. Five are quick. The one about your practice — that's the one. Everything your assistant ever does gets better with what you say there. Talk to it like you'd brief a new hire on day one, because that's literally what's happening. (Then float. Coaches who finish early: "answer its first question honestly" — NOT help neighbors. Stephanie helps neighbors.)

---

## Segment 4 — The hello (10:50, slides 5–6)

Slide 5 — DO: Meet them

**On slide:** Start a **new session** · same folder · say **"good morning"** · *(they speak second — you go first)*

**NOTE CARD:** (Say almost nothing. This is their moment, not yours. When the room's murmur peaks:) That thing where it knew you? It read its own notes before it answered. It'll do that every time, forever. Now tell it one true thing about a client — a name, where they are in the Growth Plan. That's how it learns your world.

Slide 6 — DO: Ask for the manual

**On slide:** Say: **"show me my owner's manual"** · That file is for three weeks from now · Never edit it — ask your assistant to.

**NOTE CARD:** It wrote you an owner's manual during setup. Three weeks from now when something looks weird and I'm not in the room — it's in there. What each specialist does, what to try, who to email. And you never edit it yourself — you tell your assistant, it updates the file. That's the rule for everything today: everything goes through them.

## Segment 5 — Connect + first delegation (11:00, screen once, slides 7–8)

Slide 7 — The team (the one concept slide of the day)

**On slide:** simple diagram — [Assistant's name] in the middle; four spokes: *Scheduling · Writing · Research · Meeting prep*. Caption: **"You talk to one person. They run the team."**

**NOTE CARD:** Quick mental model, then back to work. Your assistant doesn't do the work — they've got a team. You will never pick a specialist, never learn their names. You say what you need; your assistant figures out who does it. Like every good assistant you've ever had.

→ SCREEN (2 minutes)

Mike connects calendar live: + menu → calendar → browser sign-in → back → new conversation → "what does my week look like?" — let the answer land on screen.

**NOTE CARD:** One connection, once. Browser opens, you sign in with the account your calendar lives on, come back. Then watch — I ask a plain question and the scheduling specialist does the digging.

Slide 8 — DO: Connect + ask (stays up ~15 min)

**On slide:**

1. + menu → connect **Calendar** (sign in in the browser, come back)
2. **New conversation**
3. Ask one, in your own words: *"What's my week look like?" / "Draft a follow-up to [your client] about their Quarterly Priorities."*

**NOTE CARD:** Float. Listen for the coach whose draft email came back *good* — ask if you can read one line to the room at the cut. One real artifact beats every slide today.

## ⌘ 11:25 — cut-line check (no slide; decision from run-of-show)

**NOTE CARD:** Behind? Slide 9 becomes "watch mine," coaches build theirs at 1:00. On time? Full segment.

## Segment 6 — The morning brief (11:25, slide 9 up throughout)

Slide 9 — DO: Set up your morning

**On slide:**

1. Type `/bloom-coach-kit:set-up-my-morning` — two questions

2. It runs once while you watch — **approve what it asks** (*you're giving standing permission, once*)
3. It ends with a page — **BOOKMARK IT**. Phones out is fine.
4. That page rewrites itself every weekday morning.

**NOTE CARD:** The approvals: that's you giving your assistant standing permission to do this job unattended. Once, while you watch — that's the deal. And the bookmark is not optional. That page is where your assistant shows up for work every morning whether you open this app or not. (Honest beat:) It runs on your computer — laptop closed at 7:30, the brief writes itself the moment you next open the app. Check the date at the top.

## Segment 7 — Commitment (11:50, slides 10–11)

### Slide 10 — The card

**On slide:** the sentence, huge: "[Name] will \_\_\_\_\_ every \_\_\_\_\_." Below, small: *one real thing · a real cadence · sign it.*

**NOTE CARD:** The morning brief is job one and it's already running. This card is job two, and you're picking it. Best cards name a real client or a real meeting. You've watched it work for an hour — write down the thing you kept thinking about.

### Slide 11 — Read-around

**On slide:** *Name · sentence · pass.* Nothing else.

**NOTE CARD:** (Run it fast, no commentary between readers, applause once at the end. STEPHANIE PHOTOGRAPHS EVERY CARD — check with her before anyone leaves for lunch.) See you at 1:00 — bring the thing that broke or the idea you got.

## Segment 8 — Lunch + open floor (slides 12–14 as needed)

### Slide 12 — Lunch parking slide (stays up during break)

**On slide:** Open floor 1:00–2:30 · *Bring: anything broken, anything you want it to do* · Wi-Fi + Mike's email at the bottom.

### Slide 13 — Open floor menu (1:00)

**On slide:** *Catch up (Stephanie) · Add a specialist (fast coaches: ask your assistant to "add a specialist") · 1:45 — where this goes: Remote Control + Mike's daily deck · Just work — we'll float.*

### Slide 14 — What's next (2:20 close)

**On slide:** *Tomorrow ~7:30: check your bookmark · Webinar next: your brief reaches your phone · You'll hear from me in two weeks — about your card.*

**NOTE CARD:** Tomorrow morning, before email, before Slack — check the bookmark. Your assistant clocked in before you did. That feeling is the product. In two weeks I'm going to ask you about exactly one thing: the sentence on your card.

(Conference tie-in — this afternoon's five-calls-a-day session:) One more thing. Later today you're going to hear that growing your practice takes five calls a day, every day. When you get back to your assistant, just tell it that. Say "hold me to five calls a day." Tomorrow's brief will have a window blocked for them. You now own the only accountability partner that reads your calendar before you're awake.

---

## Build notes for Sunday

- Slides 3, 8, 9 are the workhorses — they stay up 10–15 minutes each. Proof them on the actual projector from the back of the actual room.
- The `radialreview/bloom-coach-kit` string on slide 3 is the only typed text of the day — make it monospace, huge, and dead-accurate. A typo there is fifteen support tickets at once.
- Slide 7's diagram: redraw with the room's most common assistant names penciled in? No — keep it generic; coaches map themselves.
- Total: 14 slides, ~6 minutes of Mike's screen. If slide-building runs long Sunday, cut slides 12–14 to plain text on the room's whiteboard — they're logistics, not payload.
